

Story #	Story Contents	Acceptance Criteria	Priority	Estimation (Story Points)	Achieved Through
1	As an Admin, I want to manage users and assign them to different roles (Chef, Waiter, Admin) so that each user has appropriate access and permissions.	<ul style="list-style-type: none"> Given I am on the Admin Console, When I navigate to the User Management interface, And I select a user, Then I should be able to assign them to a role (Chef, Waiter, Admin). And I should be able to save the changes. 	MEDIUM	7	Achieved through implementation of the Admin-users page, which allows admins to edit user roles.
2	As an Admin, I want to modify the menu items (add, edit, remove) so that the menu is kept up to date.	<ul style="list-style-type: none"> Given I am on the Admin Console, When I navigate to the Menu Management interface, And I select an action (add, edit, remove), Then I should be able to modify the menu item accordingly. And I should see a confirmation that the menu has been updated. 	MEDIUM	6	Achieved through implementation of the Menu Items page, which allows admins to edit menu items.

3	As a Waiter, I want to log in to the application so that I can access the menu and manage orders.	<ul style="list-style-type: none"> Given I am on the login screen, When I enter my credentials, And I click the "Login" button, Then I should be redirected to the Waiter landing page. And I should have access to the menu and orders. 	HIGH	5	Achieved through the implementation of Login Page. Users with the corresponding roles can access the corresponding pages.
4	As an Admin, I want to log in to the application so that I can access administrative functions.	<ul style="list-style-type: none"> Given I am on the login screen, When I enter my credentials, And I click the "Login" button, Then I should be redirected to the Admin Console. And I should have access to administrative functions. 	MEDIUM	6	Achieved through the implementation of Login Page. Users with the corresponding roles can access the corresponding pages.
5	As a Chef, I want to log in to the application so that I can access the list of orders that need to be prepared.	<ul style="list-style-type: none"> Given I am on the login screen, When I enter my credentials, And I click the "Login" button, Then I should be redirected to the Chef landing page. And I should have access to the list of orders. 	HIGH	6	Achieved through the implementation of Login Page. Users with the corresponding roles can access the corresponding pages.

6	As a Waiter, I want to view the menu in a user-friendly format so that I can easily take customer orders.	<ul style="list-style-type: none"> Given I am on the Waiter landing page, When I click on the "Menu" button, Then I should see the menu displayed in a user-friendly format. And I should be able to navigate the menu easily. 	HIGH	7	Achieved through multiple iterations of page designs with clear defined buttons allowing for ease of use.
7	As a Waiter, I want to click on menu items to add them to a customer's order (cart) so that I can efficiently take and track orders.	<ul style="list-style-type: none"> Given I am viewing the menu, When I click on a menu item, Then the item should be added to the customer's order (cart). And I should see the item in the order summary. 	HIGH	4	Achieved through implementation of the corresponding controllers, ensuring that waiters can add an item to an order in both the UI and database.
8	As a Waiter, I want to remove items from the order so that I can correct any mistakes before sending the order to the kitchen.	<ul style="list-style-type: none"> Given I am viewing the order summary, When I select an item in the order, And I click the "Remove" button, Then the item should be removed from the order. And the order total should be updated accordingly. 	MEDIUM	4	

9	As a Waiter, I want to edit or cancel an order after it has been sent to the kitchen if the customer changes their mind or if I made a mistake.	<ul style="list-style-type: none"> • Given I have sent an order to the kitchen, • When I select the order from the order list, • And I choose to edit or cancel the order, • Then I should be able to make the necessary changes. • And the Chef should be notified of the changes. 	MEDIUM	9	
10	As a Waiter, I want to receive notifications or alerts when an order is marked as completed or delayed by the Chef so that I can promptly inform the customers.	<ul style="list-style-type: none"> • Given I have sent an order to the kitchen, • When the Chef marks the order as completed or delayed, • Then I should receive a notification or alert. • And I should be able to view the status of the order. 	MEDIUM	9	

11	As a Chef, I want to mark orders as completed so that the waiters know when the food is ready to be served.	<ul style="list-style-type: none"> • Given I am viewing the list of orders, • When I have completed preparing an order, • And I mark the order as completed, • Then the order status should be updated to "Completed". • And the waiter should receive a notification that the order is ready. 	HIGH	6	Achieved through implementation of the corresponding controllers, ensuring the ability to complete orders through the complete button.
12	As a Chef, I want to mark orders as delayed if there are any issues with preparation so that the waiters are informed of any delays.	<ul style="list-style-type: none"> • Given I am viewing the list of orders, • When I encounter an issue with preparation, • And I mark the order as delayed, • Then the order status should be updated to "Delayed". • And the waiter should receive a notification of the delay. 	MEDIUM	6	

13	As a Chef, I want to see the details of each order, including any special comments, so that I can prepare the food according to the waiter's instructions.	<ul style="list-style-type: none"> • Given I am viewing an order, • When the order includes special comments or instructions, • Then I should be able to view the details of those comments. • And I should prepare the food according to the instructions provided. 	HIGH	8	Achieved through implementation of the order view in the cook page.
14	As a Chef, I want to be able to identify orders which have modifications to them so I can work more efficiently.	<ul style="list-style-type: none"> • Given I am viewing the list of orders, • When an order has modifications (e.g., special comments, instructions), • Then those orders should be flagged or HIGHLIGHTED. • And I should be able to prioritize or manage them accordingly. 	MEDIUM	7	
15	As a user, I want to log out of the application securely so that my account remains protected.	<ul style="list-style-type: none"> • Given I am logged in, • When I click the "Logout" button, • Then I should be logged out of the application. • And I should be redirected to the login screen. 	HIGH	2	Achieved through implementation of logout button.

16	As a user, I want to reset my password if I forget it so that I can regain access to the application.	<ul style="list-style-type: none"> • Given I am on the login screen, • When I click on the "Forgot Password" link, • And I enter my email address, • Then I should receive a password reset link. • And I should be able to reset my password and regain access to the application. 	MEDIUM	6	
17	As a Chef, I want to flag items that are out of stock so that waiters are informed and do not place orders for them.	<ul style="list-style-type: none"> • Given I am on the Chef landing page, • When I identify an out-of-stock item, • And I mark it as unavailable, • Then the item should be flagged as out of stock. • And waiters should be notified and unable to place orders for it. 	MEDIUM	7	

18	As an Admin, I want to track ingredient inventory so that I can ensure the kitchen is well-stocked.	<ul style="list-style-type: none"> • Given I am on the Admin Console, • When I navigate to the Inventory Management interface, • And I view the list of ingredients, • Then I should see current stock levels. • And I should be alerted when an ingredient is running LOW. 	MEDIUM	9	
19	As an Admin, I want to customize user roles with specific permissions so that I can create tailored access levels.	<ul style="list-style-type: none"> • Given I am on the User Management interface, • When I create or edit a user role, • Then I should be able to specify which permissions the role has. • And the user should only have access to the functions alLOWed by their role. 	MEDIUM	8	

20	As an Admin, I want to track user activity so that I can monitor how the application is being used.	<ul style="list-style-type: none"> • Given I am on the Admin Console, • When I navigate to the User Activity interface, • Then I should see a log of user actions. • And I should be able to filter the log by user, date, or action type. 	MEDIUM	9	
21	As a Waiter, I want to view the status of all my orders in real-time so that I can manage my workfLOW efficiently.	<ul style="list-style-type: none"> • Given I am on the Waiter landing page, • When I click on the "Order Status" button, • Then I should see the current status of all my active orders. • And I should be able to update or manage them as needed. 	MEDIUM	7	

22	As a Chef, I want to view a list of pending tasks so that I can prioritize my work for the day.	<ul style="list-style-type: none"> Given I am on the Chef landing page, When I click on the "Pending Tasks" button, Then I should see a list of tasks that need to be completed. And I should be able to mark tasks as completed as I finish them. 	MEDIUM	8	
23	As a admin , i want to edit items my store sells so that changes are reflected in the ordering system	<p>Given- > i have a item in mind that i want to change</p> <p>When-> i inspect the item i can make the change</p> <p>Then-> The item is updated and the changes are reflected</p>	MEDIUM	2	
24	As a User, i want to buttons to be responsive so that i do not have to wait for pages to update sLOWly	<p>Given- > a change needs to be made to the database or UI</p> <p>When-> a change is made</p> <p>Then-> the system interacts within a certain time threshold</p>	HIGH	4	Achieved through button implementation and database management.
25	As a User, i want buttons to not be small or difficult to press so that it is easy to interact with the system	<p>Given- > ...</p> <p>When-> ...</p> <p>Then-> ...</p>	HIGH	1	Achieved through UI/UX design iterations.

26	As an Admin , i want to view my databases in a table format so that the current state of the entries are easy to see	Given- > the user as made entries to the database When-> the user access the database Then-> A table should be on the UI	MEDIUM	1	
27	As a Cook , i want to view a recommended order order so that i know what order i should do next	Given- > there are orders When-> i open/ view the recommended tab Then-> there is an order list produced based off time	MEDIUM	4	
28	As a waiter, i want to remove mistakes so that taking orders is done quicker	Given- > The user makes a mistake When-> The user clicks the correction button Then-> The last input is removed	HIGH	5	Achieved through implementation of the corresponding controllers, ensuring the ability to remove an order in both the UI and database.
29	As a Waiter, I want to view real-time availability of menu items so that I can inform customers immediately if an item is unavailable.	Given- > the kitchen has marked an item as out of stock When-> I view the menu Then-> I should see the item marked as unavailable and I should be unable to add it to an order.	MEDIUM	6	

30	As a Chef, I want to set the status of individual dishes as 'prepped' or 'cooked' so that the kitchen can track progress on each item.	Given- >I am viewing an order When-> I update the status of a dish Then-> The status should be reflected in the system	MEDIUM	6	
31	As a Chef, I want to receive alerts when an ingredient is running LOW so that I can restock in time.	Given- >I am monitoring inventory When-> an ingredient reaches a LOW threshold Then-> I should receive an alert	MEDIUM	5	
32	As an Admin, I want to set up different user roles and permissions so that access to the system is controlled based on job function.	Given- >I am configuring user access When-> I assign roles Then-> each user should have role-based functionality	MEDIUM	8	
33	As an Admin, I want to back up the system data regularly so that all information is securely stored and can be restored if needed.	Given- > I am on the admin console When-> I configure backups Then-> the system should automatically back up data at regular intervals	MEDIUM	8	
34	As a Chef, I want to receive alerts for any special dietary requests so that I can prepare dishes according to customer needs.	Given- > an order has special dietary requests When-> the order is sent to the kitchen Then-> the system should HIGHLIGHT these requests	MEDIUM	5	

35	As a Waiter, I want to view clear markings on the menu that indicate gluten-free, dairy-free, vegetarian, vegan, and other dietary options so that I can easily provide accurate information to customers.	<ul style="list-style-type: none"> • Given I am viewing the menu in the Waiter Interface, • When I look at the menu items, • Then each item should have clear markings or icons indicating if it is gluten-free, dairy-free, vegetarian, vegan, or meets other dietary requirements. • And the markings should be consistent and easy to understand. 	MEDIUM	5	
36	As a Waiter, I want to add special comments or instructions to specific items in the order so that the Chef is aware of customer preferences or restrictions.	<ul style="list-style-type: none"> • Given I am viewing the order summary, • When I select an item in the order, • And I add a comment or special instruction, • Then the comment should be saved with the order. • And the Chef should be able to see the comment when preparing the order. 	MEDIUM	5	

37	As a Waiter, I want to confirm and send the order to the kitchen so that the Chef can begin preparing the meal.	<ul style="list-style-type: none"> Given I am viewing the order summary, When I click the "Send Order" button, Then the order should be sent to the kitchen. And I should receive a confirmation that the order was successfully sent. 	MEDIUM	8	
38	As a Waiter, I want to view a history of my previous orders so that I can track my work and refer to past orders if needed.	<ul style="list-style-type: none"> Given I am on the Waiter landing page, When I click on the "Order History" button, Then I should see a list of my previous orders. And I should be able to view details of each order. 	MEDIUM	7	
39	As a Waiter, I want to be able to filter the menu so that I can find menu items quickly to place into the order.	<ul style="list-style-type: none"> Given I am viewing the menu, When I use the filter options, Then I should see only the menu items that match my filter criteria. And I should be able to select items from the filtered list to add to the order. 	MEDIUM	7	

40	As a Chef, I want to view a history of my previous completed orders so that I can track my work and refer to past orders if needed.	<ul style="list-style-type: none"> • Given I am on the Chef landing page, • When I click on the "Order History" button, • Then I should see a list of my previous completed orders. • And I should be able to view details of each order. 	MEDIUM	6	
41	As an Admin, I want to generate detailed sales reports so that I can analyze the restaurant's performance.	<ul style="list-style-type: none"> • Given I am on the Admin Console, • When I navigate to the Sales Tracking interface, • And I select a time period (daily, weekly, monthly), • Then I should be able to generate a detailed sales report. • And the report should include total sales, popular menu items, and revenue generated. 	MEDIUM	9	

42	As a Waiter, I want to access a list of top-selling items so that I can suggest popular dishes to customers.	<ul style="list-style-type: none"> • Given I am on the Waiter landing page, • When I click on the "Top-Selling Items" button, • Then I should see a list of the most popular dishes. • And I should be able to suggest these items to customers. 	MEDIUM	6	
43	As an Admin, I want to manage seasonal menus so that I can update the menu based on the time of year.	<ul style="list-style-type: none"> • Given I am on the Admin Console, • When I navigate to the Menu Management interface, • And I select the seasonal menu option, • Then I should be able to add, edit, or remove seasonal items. • And the menu should update based on the selected season. 	MEDIUM	5	

44	As a Chef, I want to view upcoming reservations so that I can prepare for busy periods.	<ul style="list-style-type: none"> • Given I am on the Chef landing page, • When I click on the "Upcoming Reservations" button, • Then I should see a list of reservations for the day. • And I should be able to plan for periods of HIGH demand. 	MEDIUM	7	
45	As a Waiter, I want to view table assignments so that I can manage my section efficiently.	<ul style="list-style-type: none"> • Given I am on the Waiter landing page, • When I click on the "Table Assignments" button, • Then I should see a list of tables assigned to me. • And I should be able to view the status of each table. 	MEDIUM	5	

46	As an Admin, I want to set up automatic notifications for LOW stock so that I can proactively manage inventory.	<ul style="list-style-type: none"> • Given I am on the Inventory Management interface, • When I enable LOW stock notifications, • Then I should receive alerts when ingredients fall beLOW a set threshold. • And I should be able to restock before running out. 	MEDIUM	7	
47	As a Chef, I want to prioritize orders based on preparation time so that I can manage my workfLOW more effectively.	<ul style="list-style-type: none"> • Given I am viewing the list of orders, • When I sort the orders by preparation time, • Then the orders should be prioritized accordingly. • And I should be able to start with the quickest preparations. 	MEDIUM	7	
48	As a user, I want to receive an estimated wait time for my order so that I can manage my expectations.	<ul style="list-style-type: none"> • Given I have placed an order, • When the order is confirmed, • Then I should receive an estimated wait time. • And I should be notified if the wait time changes. 	MEDIUM	6	

49	As a Chef, I want to view ingredient usage trends so that I can better manage inventory and preparation.	<ul style="list-style-type: none"> • Given I am on the Chef landing page, • When I click on the "Ingredient Trends" button, • Then I should see usage trends for each ingredient. • And I should be able to adjust my preparation based on these trends. 	MEDIUM	7	
50	As a user, I want to customize my profile with a photo and additional information so that my account feels personalized.	<ul style="list-style-type: none"> • Given I am on the user profile page, • When I upload a photo or add additional information, • Then my profile should be updated with the new details. • And the changes should be reflected across the application. 	MEDIUM	4	
51	As a Waiter, I want to generate receipts directly from the application so that I can provide customers with a physical copy of their bill.	<ul style="list-style-type: none"> • Given I am on the payment screen, • When I finalize a payment, • Then I should have the option to print a receipt. • And the receipt should include all relevant details of the transaction. 	MEDIUM	7	

48	As a Waiter, I want to manage customer seating arrangements so that I can optimize the use of the dining area.	<ul style="list-style-type: none"> • Given I am on the Waiter landing page, • When I click on the "Seating Arrangements" button, • Then I should see the current seating plan. • And I should be able to adjust seating based on customer needs and reservations. 	MEDIUM	9	
52	As a Chef, I want to receive alerts for special dietary requirements so that I can prepare meals accordingly.	<ul style="list-style-type: none"> • Given I am viewing an order, • When the order includes special dietary requirements, • Then I should receive an alert for those requirements. • And I should be able to prepare the meal according to the specified needs. 	MEDIUM	5	
53	As an Admin, i want to keep track of sales each day so that I can view data for each day	<p>Given-> that the data base, ordering and order management system can take and store orders.</p> <p>When-> multiple orders are processed through the system</p> <p>Then-> the data from the orders is visible in a graph and can be analysed</p>	MEDIUM	4	

54	As a waiter, i want to communicate changes to ordered times so that they are shown to the line cooks viewing the cook UI	Given- > A item is selected and changes to ingredients need to be made When-> The waiter selects the item the ability to make comments is there Then-> The information about the item is displayed in the kitchen	MEDIUM	1	
55	As a cook, i want to change the current order so that orders switch which order i am working on	Given- > there are orders in the system and the cook UI is open When-> the user drags the order around or clicks a button Then-> the order of the orders change	MEDIUM	3	
56	As a Cook , i want to flag orders so that they can be put as HIGH priority	Given- >i have a order that needs to be flagged When-> i click a button Then-> the order is made more visable and sent to the front of the list/UI	MEDIUM	1	
57	As a Waiter, I want to flag customer allergies in orders so that the kitchen is aware of any special preparation instructions.	Given- >I am taking an order When-> I flag an allergy Then-> the kitchen should be alerted of the allergy	MEDIUM	5	

58	As a Chef, I want to view the popularity of menu items over time so that I can adjust the menu according to customer preferences.	Given- >I am on the kitchen dashboard When-> I view item popularity Then-> I should see data trends for each menu item	MEDIUM	8	
59	As an Admin, I want to manage seasonal menu changes.	Given- >The season is changing When-> I update the menu Then-> The changes should reflect on the system	MEDIUM	7	
60	As a Waiter, I want to see which tables are about to finish their meal so that I can be ready to clear the table and prepare for the next customer.	Given- > I am on the Waiter Dashboard When-> I view the table's status Then-> I should see an estimated time of meal completion	MEDIUM	5	
61	As a Waiter, I want to add a special request or note to an order so that the kitchen is aware of any specific customer needs.	Given- >I am taking an order When-> a customer makes a special request Then-> I should be able to add it as a note to the order	MEDIUM	3	
62	As a Waiter, I want to quickly switch between active orders so that I can manage multiple tables efficiently.	Given- > I am managing multiple tables When-> I need to update an order Then-> I should be able to switch between active orders without losing my place	MEDIUM	4	

63	As a Chef, I want to filter orders by preparation time so that I can prioritize dishes that take longer to cook.	Given- > I am viewing incoming orders When-> I filter by preparation time Then-> I should see dishes that require more time at the top of the list	MEDIUM	5	
64	As a Waiter, I want to notify the kitchen of a table's special celebration (e.g., birthday) so that they can prepare accordingly.	Given- > a customer informs me of a special occasion When-> I place the order Then-> I should be able to notify the kitchen to prepare something special	MEDIUM	4	
65	As a Waiter, I want to notify the customer when their table is ready so that they can be seated promptly.	Given- > a customer is waiting for a table When-> their table is ready Then-> I should be able to then get an alert and let them know	MEDIUM	4	
66	As a Chef, I want to view and manage substitute ingredients for dishes so that I can handle ingredient shortages effectively.	Given- > an ingredient is unavailable When-> I view the dish Then-> I should see a list of approved substitutes and adjust the recipe accordingly	MEDIUM	6	
67	As a Chef, I want to view the nutritional information of each dish so that I can respond to customer inquiries.	<ul style="list-style-type: none"> Given I am viewing an order, When I select a dish, Then I should see its nutritional information 	MEDIUM	5	

68	As a user, I want to securely store my payment details so that I can easily complete transactions in the future.	<ul style="list-style-type: none"> • Given I am on the payment screen, • When I enter my payment details, • And I choose to save them for future use, • Then my payment details should be securely stored. • And I should be able to use them in future transactions. 	LOW	9	
69	As a user, I want to receive personalized recommendations based on my order history so that I can discover new menu items.	<ul style="list-style-type: none"> • Given I have placed previous orders, • When I view the menu, • Then I should receive personalized recommendations based on my order history. • And I should be able to add these recommended items to my order. 	LOW	8	

70	As a user, I want to receive alerts for promotional discounts so that I can take advantage of special offers.	<ul style="list-style-type: none"> • Given I am logged into the application, • When a promotional discount is available, • Then I should receive an alert about the offer. • And I should be able to apply the discount to my order. 	LOW	4	
71	As a Waiter, I want to split a bill between multiple customers so that I can accommodate group payments.	<ul style="list-style-type: none"> • Given I am on the payment screen, • When I select the "Split Bill" option, • And I enter the amount each customer is paying, • Then the bill should be split accordingly. • And each customer should be able to make their payment separately. 	LOW	7	

72	As a user, I want to view my order history and reorder previous meals so that I can quickly place repeat orders.	<ul style="list-style-type: none"> Given I am on the user profile page, When I view my order history, Then I should see a list of my previous orders. And I should be able to reorder any of them with a single click. 	LOW	5	
73	As a Waiter, I want to manage tips and gratuities so that I can accurately report my earnings.	<ul style="list-style-type: none"> Given I am on the payment screen, When I finalize a payment, Then I should be able to add a tip or gratuity amount. And the tip should be recorded and added to my earnings report. 	LOW	7	
74	As an Admin, I want to back up the application data regularly so that I can ensure data integrity and recovery.	<ul style="list-style-type: none"> Given I am on the Admin Console, When I access the Backup and Restore interface, Then I should be able to initiate a backup of all application data. And I should be able to restore data from a previous backup if needed. 	LOW	7	

75	As an Admin, I want to integrate the application with third-party analytics tools so that I can gain deeper insights into performance.	<ul style="list-style-type: none"> • Given I am on the Admin Console, • When I access the Analytics Integration interface, • Then I should be able to connect the application to third-party tools. • And I should be able to view detailed analytics data from these tools. 	LOW	1	
76	As a user, I want to receive a confirmation email after resetting my password so that I know the process was successful.	<ul style="list-style-type: none"> • Given I have reset my password, • When the reset process is complete, • Then I should receive a confirmation email. • And the email should include a link to log back into the application. 	LOW	7	

77	As an Admin, I want to set up automated reminders for reservation confirmations so that customers are reminded of their upcoming reservations.	<ul style="list-style-type: none"> • Given I am on the Admin Console, • When I access the Reservation Management interface, • Then I should be able to set up automated reminder emails. • And customers should receive a reminder email before their reservation. 	LOW	7	
78	As an Admin, I want to assign shifts to employees so that I can ensure proper staffing for each service period.	<p>Given- >I am on the admin console</p> <p>When-> I navigate to the employee management interface</p> <p>Then-> I should be able to assign them to a shift</p>	LOW	7	
79	As a Chef, I want to print a summary of orders for my station so that I can work offline if needed.	<p>Given- >I am viewing the list of orders</p> <p>When-> I click the “Print Summary“ button</p> <p>Then-> I should be able to print the current orders</p>	LOW	5	
80	As a Waiter, I want to set up alerts for upcoming reservations so that I can prepare the tables in advance.	<p>Given- > I am on the waiter landing page</p> <p>When-> I click on the “Upcoming Reservations“ button</p> <p>Then-> I should be able to see alerts for upcoming reservations</p>	LOW	5	

81	As an Admin, I want to generate reports on average wait times per table so that I can identify areas for improvement.	Given- > I am on the admin console When-> I generate a report Then-> I should see the average wait times for each table	LOW	8	
82	As a Waiter, I want to apply discounts or promotions to orders so that customers can benefit from special offers.	Given- >a customer is eligible for a discount When-> I process the order Then-> I should be able to apply the discount or promotion	LOW	4	
83	As an Admin, I want to track employee hours and overtime so that I can manage payroll accurately.	Given- >I am on the admin console When-> I view employee records Then-> I should see hours worked	LOW	8	
84	As a Waiter, I want to be able to rate each customer's experience.	Given- >a customer has completed their meal When-> they provide feedback Then-> I add that feedback to the order	LOW	6	
85	As a Chef, I want to review and rate the quality of delivered ingredients so that I can ensure only HIGH-quality ingredients are used.	Given- >a delivery has arrived When-> I inspect the ingredients Then-> I should be able to rate their quality in the system	LOW	6	

86	As an Admin, I want to integrate with a loyalty program so that returning customers can accumulate and redeem points.	<p>Given- > a customer is part of the loyalty program</p> <p>When-> they place an order under their name to the waiter</p> <p>Then-> their points should be tracked and redeemable</p>	LOW	7	
87	As an Admin, I want to import menu items from a file so that I can quickly update the menu.	<ul style="list-style-type: none"> Given I am on the Menu Management interface When I select the import option Then I should be able to upload a file containing menu items 	LOW	6	
88	As a Waiter, I want to group orders by table so that I can manage multiple orders for the same table more efficiently.	<ul style="list-style-type: none"> Given I am viewing active orders When I select the group by table option Then the orders should be grouped by their respective tables 	LOW	3	
89	As a Waiter, I want to see orders by table so that I can manage table billing more efficiently.	<ul style="list-style-type: none"> Given I am viewing table orders When I select the table Then the orders should be shown for that table 	LOW	4	

90	As an Admin, I want to set user access expiration dates so that temporary access is automatically revoked.	<ul style="list-style-type: none"> Given I am logged in as a admin and managing user roles When I assign a role to a user Then I should be able to set an expiration date for their access 	LOW	8
